CUMULATED LIST

of

NEW MEDICAL

SUBJECT HEADINGS

1963-1973

INTRODUCTION

We have prepared this cumulated list of terms that have been added each year since 1963 to the Medical Subject Headings of the National Library of Medicine in order to provide a single reference source for the users of Cumulated Index Medicus and for the librarians and scientists who are performing retrospective searches of the MEDLINE data base.

The terms are presented in alphabetic order, with the year of their introduction and the subject heading or headings under which the concept was indexed in previous years. In addition, a listing by year of introduction into the vocabulary is provided. For those who begin a bibliographic search with the latest volumes of Cumulated Index Medicus, this provides a means of following over the ten-year period the changes of subject headings relating to the concepts being sought. For example, if information is desired on Immunoglobulin Fragment A, in 1973 it will be found under the specific heading IGA. In 1972 it will be found under IMMUNOGLOBULINS, and from 1965 to 1971 under GAMMA GLOBULIN or the more specific term GAMMA GLOBULIN, 7S. Prior to 1965, GAMMA GLOBULIN alone was used for indexing of this concept.

Finally, there is a listing of the previously indexed terms and the new terms which either replaced them or provided more specific aspects in subsequent years.

For those medical libraries using Medical Subject Headings as the authority for their subject catalog, this list will provide ready access to the terms by year in order to update the card catalog and to prepare cross-references useful to those consulting it.
